

CORPORATE PROFILE

Since 1965, Pacific Valve Services Inc. has provided valve sales, supply, maintenance and repair services to the oil and gas industry. Our company, while capable of handling large complex projects, is also reputed for its ability to effectively accommodate smaller, specialized needs. Our flexibility allows us to quickly dispatch multi-skilled technicians to respond to emergency situations, and to complete repairs or maintenance efficiently and economically

PVS specializes in API 6A type gate valves, mud valves, kellycocks and safety valves, as well as in the design and manufacture of kill and choke manifold systems.

At Pacific Valve Services, our people are our company.

Currently, PVS management is supported by more than 16 dedicated technical and administrative staff, working in conjunction with our shop and field supervisors. Their commitment, integrity and reliability – reinforced with our strong technological and financial resource base – ensures the delivery of the highest standard of service available to our clients.

PVS is located in southeast Edmonton with easy access to all major transportation routes which facilitates prompt response to service calls, and equipment pick-up or delivery. We are in close proximity to all major suppliers of API valves and parts.

Our facilities consist of 15,000 square feet of shop space which incorporates areas for repair and service, painting and machining. The two-acre yard provides ample storage of equipment and service vehicles, while allowing trucks easy access for pick up and delivery.

Normal hours of operation are from 6:00 AM to midnight, covered by two shifts, five days per week; 24-hour emergency service is available seven days per week at no overtime charge. Our mobile service units can be dispatched to worksites anywhere in Alberta, British Columbia or Saskatchewan.
